LAYERED SECURITY

# CONTINUOUS SECURITY CONTAINMENT

Security that goes beyond alerts and stops security threats in their tracks by isolating networks and devices in real time.

**VIGILANT**

Focused on threat detection and triaging alerts across all connected networks and devices—including cloud

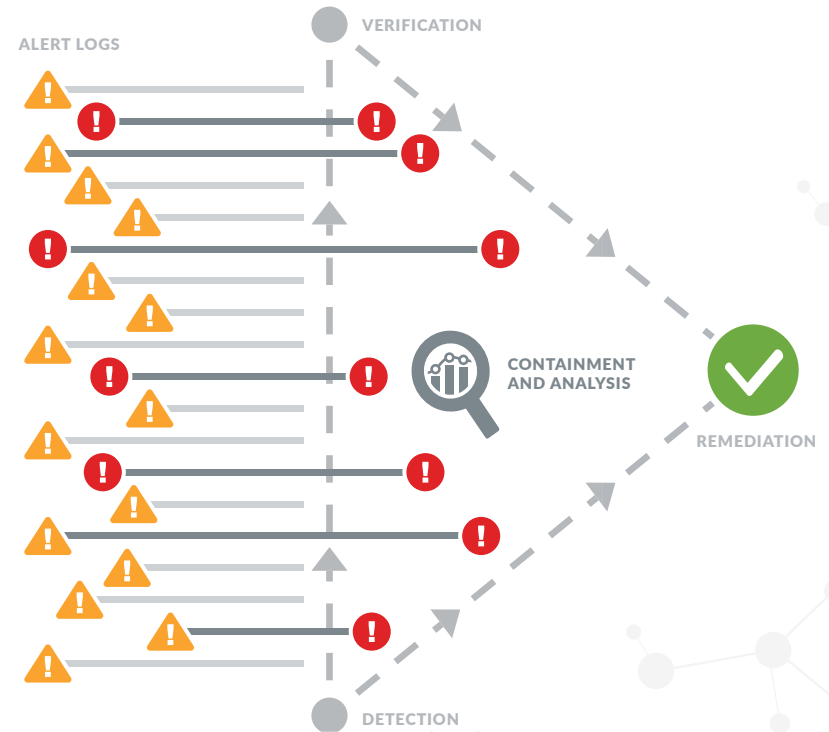

**SOPHISTICATED**

Actionable intelligence based on machine learning combined with human analysis that highlights the threats that matter

**DEDICATED**

Delivering prompt incident response consulting from global security professionals and local experts for containing threats at multiple vectors

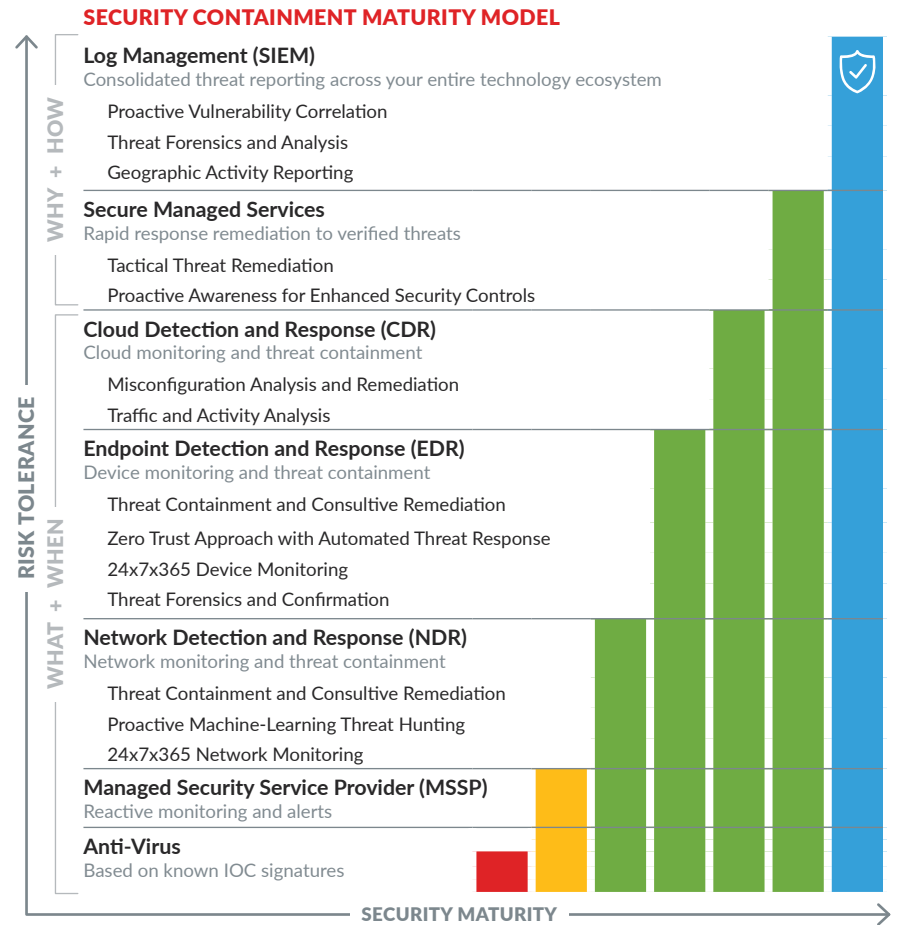

Remediate verified security threats and affected devices without lifting a finger.

### NETWORK DETECTION AND RESPONSE

Monitoring network activity with full telemetry across your entire local environment

### ENDPOINT DETECTION AND RESPONSE

Integrated endpoint device isolation that stops suspicious activity and threats from accessing additional networks and devices

### CLOUD DETECTION AND RESPONSE

Monitoring cloud activity across your entire cloud ecosystem, including hosted virtual machines, Microsoft 365, AWS, Microsoft Azure and Google Cloud

### COMPREHENSIVE LOG MANAGEMENT

Aggregated visibility to critical alerts that continuously evolves regardless of environment, identifying security vulnerabilities and prioritizes remediation to prevent disruption
